

MyVSAT Portal

Reliability to the Extreme™

Harris CapRock's MyVSAT Portal is an online network management portal, setting an important new benchmark in satellite and hybrid network monitoring and management. Designed as the most comprehensive network management system currently available, the MyVSAT Portal is optimized for use with any VSAT technology and allows users to monitor the operational performance of their networks.

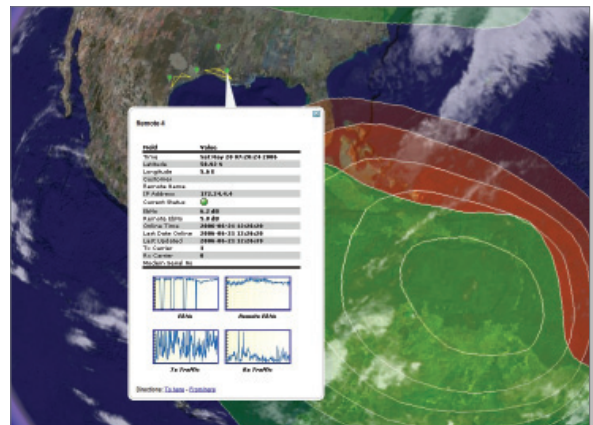

The MyVSAT dashboard displays an at-a-glance network overview.

BENEFITS

- > Improves information visibility at remote sites
- > Enables data collaboration among multiple users
- > Improves operational performance

Solution Overview

- Network information dashboard
- Performance reporting
- Real-time asset tracking
- Secure multi-level access
- 24/7 Harris CapRock CSC support

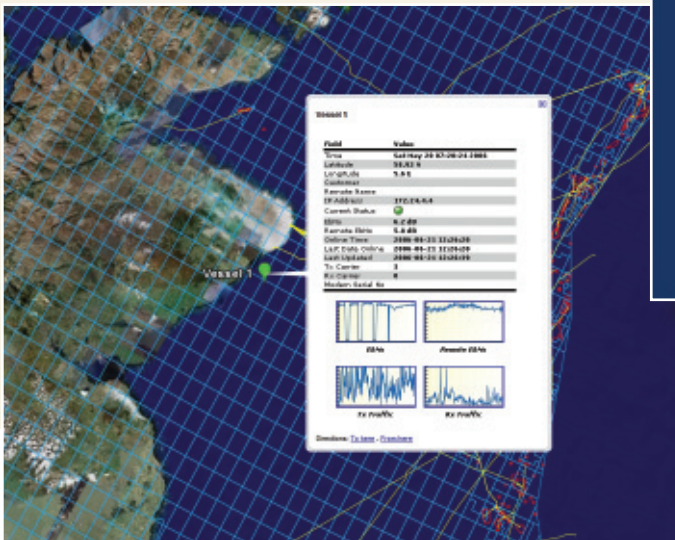

Location tracker provides weather and satellite footprint overlay for location maps.

MyVSAT Portal

Reliability to the Extreme™

AT-A-GLANCE FEATURES

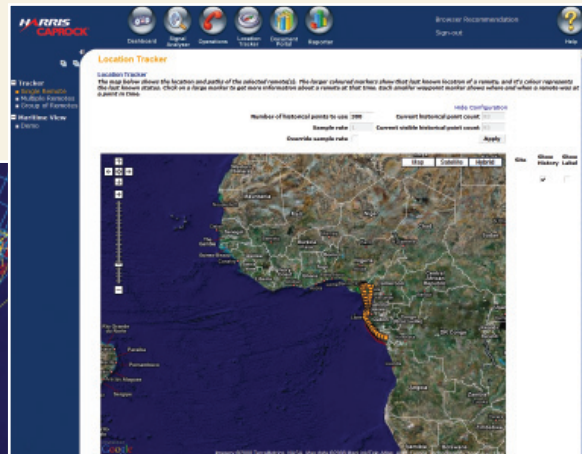

Site maps provide easy access to network information for any given locale.

Signal Analyzer

- > Monitors the performance of satellite links and helps to identify link degradations
- > Primary tool used by Harris CapRock for problem diagnosis, event correlation and fault resolution

Reporter

- > Analyzes key measurements such as site and link availability, throughput, and signal level
- > Standard and customized reports

Location tracker maps vessel movement history.

Location Tracker

- > Provides instant overview of vessel movement history
- > Provides latest summary and details of link status
- > Information overlays include weather and satellite range

Ticketing System

- > Documents incident trouble tickets in an easy-to-navigate window
- > Contains predefined filter for active and fixed tickets
